Experiment-4 b

Study Reminder App

ROLL NO: 240701198 **NAME:JAI AAKASH S**

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using Wireflow.

AIM

To design a prototype that includes both familiar and unfamiliar navigation elements and evaluate the ease of use for different user groups using a Wireflow prototype.

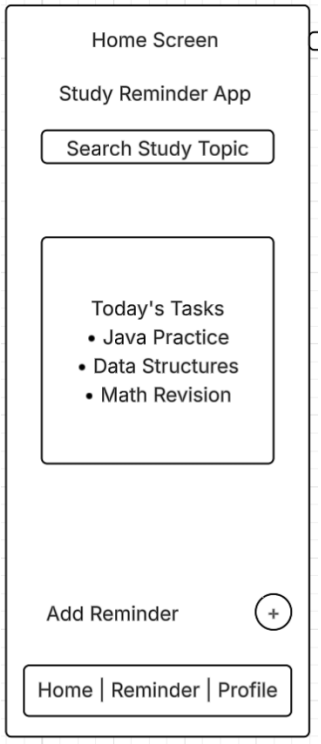
TOOL USED

Wireflow Tool: https://wireflow.co/

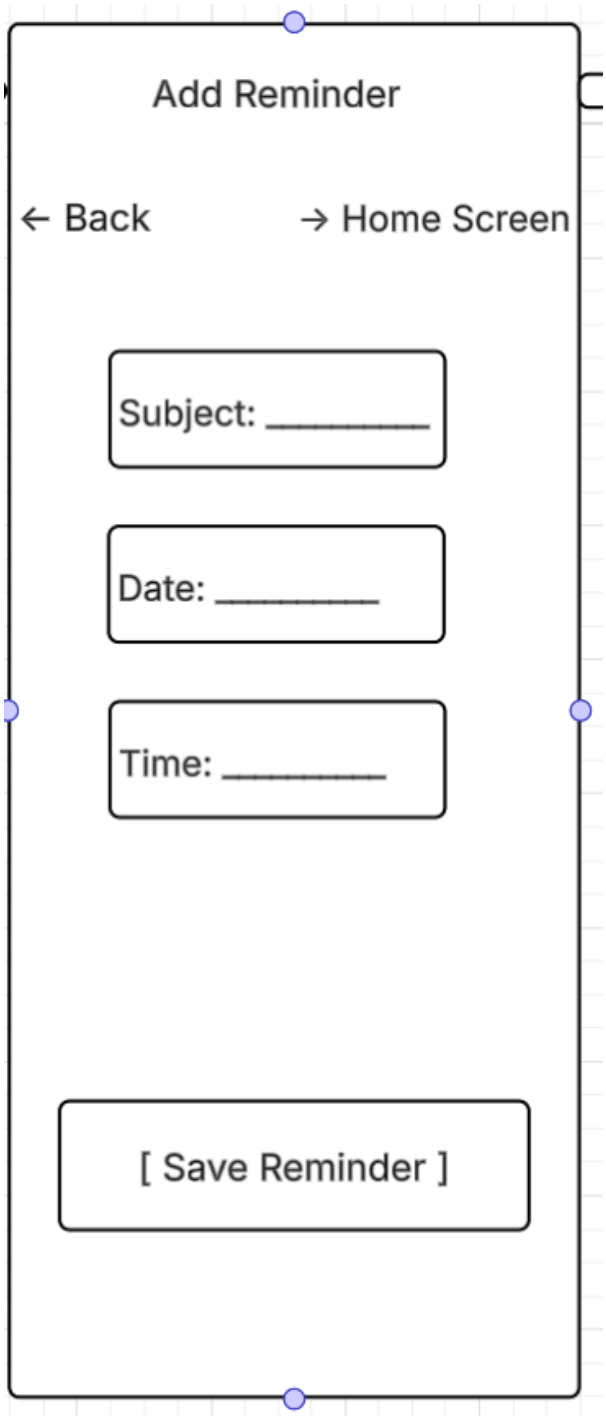
PROCEDURE

Step 1: Plan the Prototype

Identify familiar navigation elements such as buttons, menus, search bars, and back navigation. Identify unfamiliar navigation elements such as gesture-based navigation (swipe) or floating action buttons. Sketch the layout of the application screens.

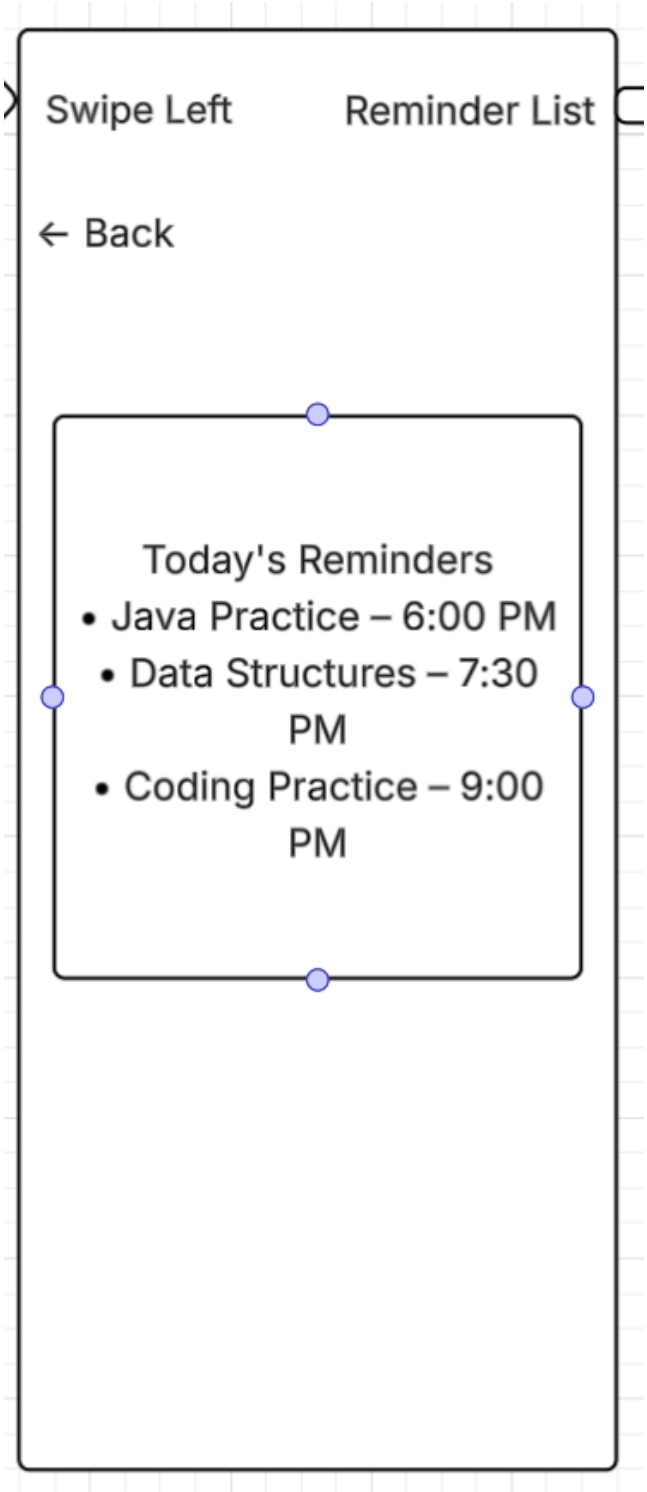


Step 2: Set Up the Wireflow Project
Open the Wireflow tool and create a new project. Design the screens for the prototype.



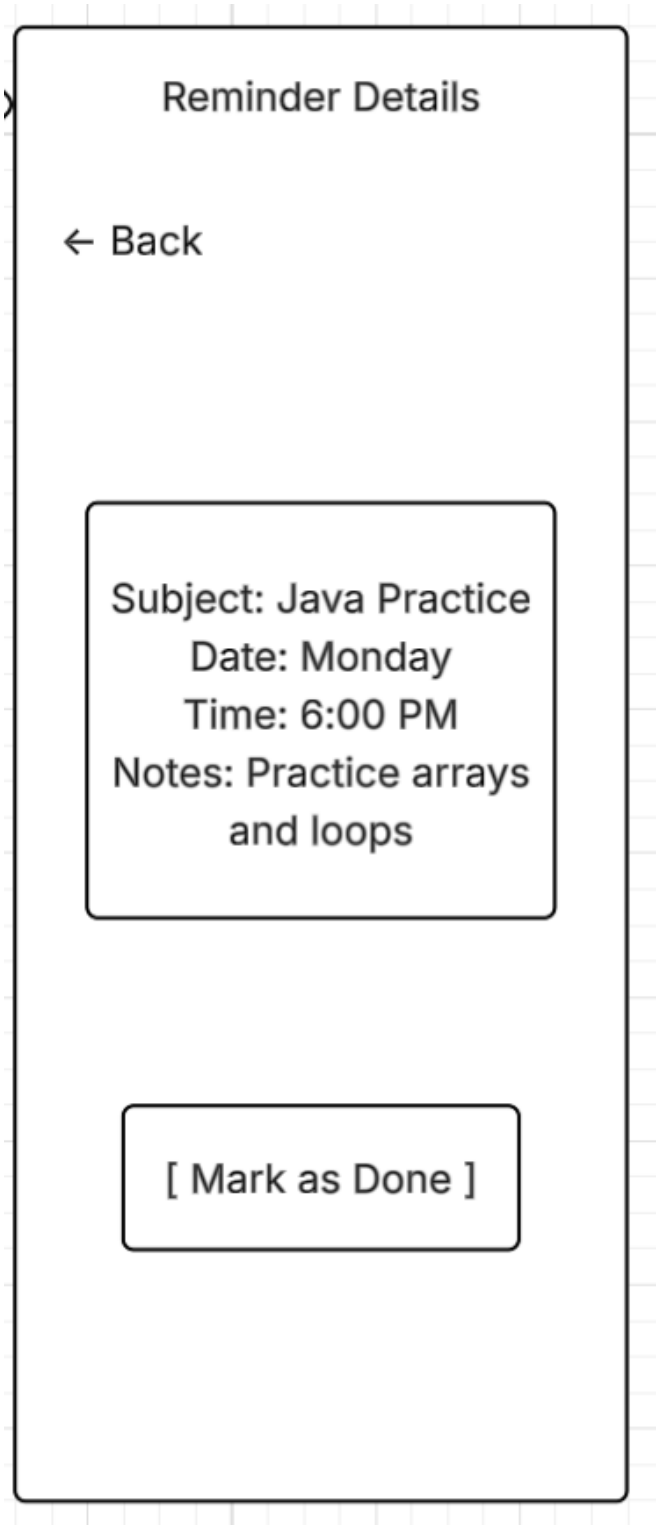
Step 3: Design the Prototype
Create the following screens: Home Screen, Add Reminder Screen, Reminder List Screen, Reminder Details Screen. Add familiar UI components such as search bar, back button, and

save button. Add unfamiliar navigation such as swipe gesture and floating action button. Connect screens using arrows to represent user navigation.



Step 4: Prepare for Usability Testing
Identify different user groups such as students, teachers, and tech-savvy users.

Step 5: Conduct Testing
Ask users to perform tasks such as adding a reminder and viewing reminder details. Observe how easily users navigate between screens and collect feedback.



Step 6: Analyze and Report
Compare usability of familiar and unfamiliar navigation elements and summarize findings.

PROTOTYPE DESCRIPTION

The prototype developed is a Study Reminder Application consisting of four screens:
1. Home Screen – Displays study tasks and provides a button to add reminders.
2. Add Reminder Screen – Allows users to enter subject, date, and time.
3. Reminder List Screen – Displays the list of saved reminders.
4. Reminder Details Screen – Shows full details of a selected reminder.
Navigation between screens is represented using Wireflow arrows.

NAVIGATION ELEMENTS USED

Familiar Navigation Elements

Search bar, Back button, Save button, Bottom navigation bar. These elements are commonly used in mobile applications and are easy for users to understand.

Unfamiliar Navigation Elements

Floating Add Reminder (+) button and Swipe Left gesture to open the reminder list. These introduce modern navigation techniques.

USER GROUP EVALUATION

User Group	Observation
Students	Easily navigated the prototype
Teachers	Slight confusion with swipe gesture
Tech-savvy users	Quickly understood all navigation elements

RESULT / CONCLUSION

The prototype demonstrates both familiar and unfamiliar navigation elements. Familiar navigation methods such as buttons and menus were easily understood by most users, while unfamiliar navigation techniques like gestures required some learning. Overall usability of the prototype was good and users were able to complete tasks successfully.
