CS23A34
USER INTERFACE DESIGN
EXPERIMENT-5

ROLL NO: 240701198
NAME: JAI AAKASH S

Aim

To analyze the user interaction process in a ticket booking in bus application and represent it using a user flow diagram in Lucidchart.

User Flow Description

1. App Launch

- **Start**
- **Open the app**
- **Enter / Confirm location**
- **Search bus (Enter source & destination)**

2. Bus Selection

- **View available bus list**
- **Select bus**
- **View bus details (time, fare, seat availability)**
- **Select date**
- **Select seats**

3. Passenger Details & Checkout

- **Enter passenger details**
- **Review booking details**
- **Proceed to checkout**

4. Login Decision

- **If not logged in → Log in / Sign up**
- **If logged in → Confirm contact details**

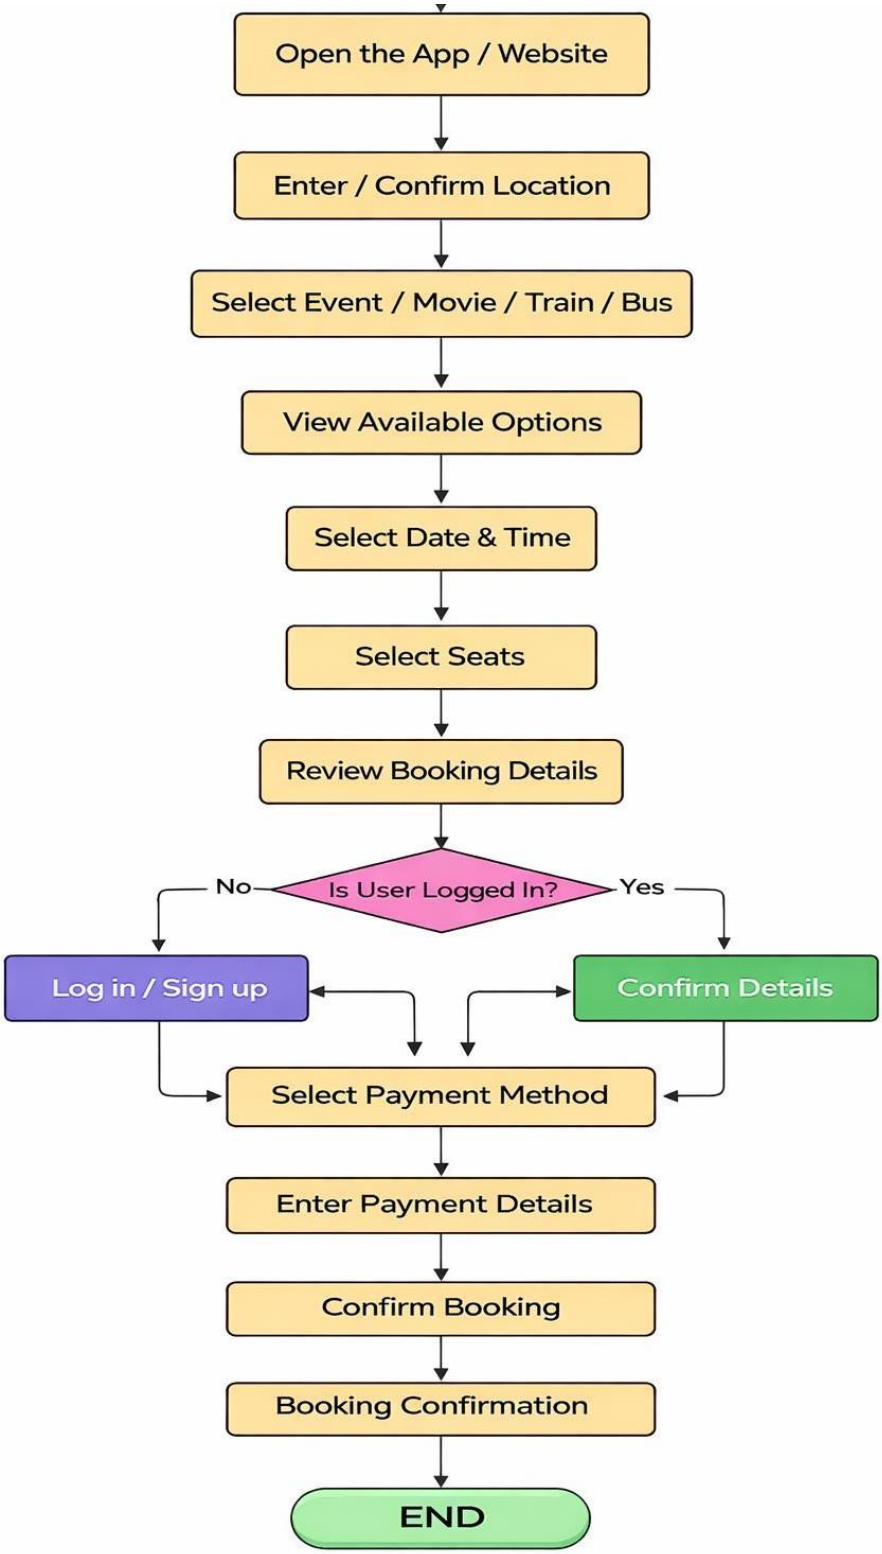
5. Payment Process

- **Select payment method**
- **Enter payment details**
- **Confirm booking**
- **Ticket confirmation (E-ticket generated)**

Conclusion

The experiment demonstrates how a structured user flow improves clarity and usability in a bus ticket booking system. The login decision ensures user authentication before payment. Proper step-by-step navigation from bus selection to payment confirmation enhances user experience and ensures successful ticket booking

FLOWCHART



Open the App / Website
Enter / Confirm Location
Select Event / Movie / Train / Bus
View Available Options
Select Date & Time
Select Seats
Review Booking Details
Is User Logged In?
No
Yes
Log in / Sign up
Confirm Details
Select Payment Method
Enter Payment Details
Confirm Booking
Booking Confirmation
END
